A thickness of one inch and width of seven and one-half inches, was therefore cut from the up stream side of the thicker planks, around the entrance to the tube. The distance seven and one-half inches was arbitrary, and judged sufficient to prevent any influence of the one inch shoulder on the flow of water through the tube. The bulkhead was thoroughly caulked and tested for leakage previous and subsequent to the making of the experiments with the submerged tubes. The plan followed was to study the simple forms of submerged tubes, four feet square with entrance having square corners, and of lengths varying from thirty-one hundredths feet to fourteen feet, finding the losses...

Reviews

This publication may be really worth a go through, and a lot better than other. It really is written in simple terms and never difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.
